

General Electric Authorized T700 Repair and Services Engine Upgrades (701C/D & New 701D)

GENERAL ELECTRIC

Under specific license, we are the Authorized Repair and Services Provider for the GE T700/CT7 Series Engines for Restricted Category and Public Use Aircraft in all UH-60 variant helicopters. We operate evaluation centers in both the US and Australia and are fully integrated with our own logistics provider allowing us to manage every part of the process required to transport engines to and from our facilities.

We are authorized to provide "Used Serviceable Material" through the United States Army Black Hawk Exchange and Sales Team ("BEST") program.

We carry our own extensive rotatable pool of assets, and can execute unrestricted sale of these assets, as well as provide GE authorized repair for engines and LRUs. Our engines are available to operators for purchase, lease, or are Ready-for-Exchange. All engines are fully GE-certified using only OEM-supplied parts.
